

Schedule 3 of the Flood and
Water Management Act 2010
for sustainable drainage,
explanatory memorandum,
incorporating the regulatory
impact assessment and
explanatory notes,
October 2018

Explanatory Memorandum to:

- 1. The Sustainable Drainage (Approval and Adoption) (Wales) Order 2018**
- 2. The Sustainable Drainage (Approval and Adoption Procedure) (Wales) Regulations 2018**
- 3. The Sustainable Drainage (Application for Approval Fees) (Wales) Regulations 2018**
- 4. The Sustainable Drainage (Enforcement) (Wales) Order 2018**
- 5. The Sustainable Drainage (Appeals) (Wales) Regulations 2018**

This Explanatory Memorandum has been prepared by the Department for Environment and Rural Affairs and is laid before the National Assembly for Wales in conjunction with the above subordinate legislation and in accordance with Standing Order 27.1.

Minister's Declaration

In my view, this Explanatory Memorandum gives a fair and reasonable view of the expected impact of the:

1. The Sustainable Drainage (Approval and Adoption) (Wales) Order 2018
2. The Sustainable Drainage (Approval and Adoption Procedure) (Wales) Regulations 2018
3. The Sustainable Drainage (Application for Approval Fees) (Wales) Regulations 2018
4. The Sustainable Drainage (Enforcement) (Wales) Order 2018
5. The Sustainable Drainage (Appeals) (Wales) Regulations 2018

I am satisfied that the benefits justify the likely costs.

Hannah Blythyn AM
Minister for Environment

15 October 2018

Annex 1 – Housing development

Annex 2 – Commercial and industrial development

Annex 3 – Developers in Wales

PART 1 – Explanatory Memorandum

1. Description

- 1.1 Schedule 3 of the Flood and Water Management Act 2010 (the 2010 Act) relates to provisions for sustainable drainage (SuDS). These include the establishment of a SuDS Approving Body (SAB) to be set up within the local authority alongside their lead local flood authority (LLFA) duty. SAB approval will be required before construction of drainage systems can commence on new and redeveloped sites. Provided appropriate statutory National SuDS Standards (SuDS standards) are met, the SAB will be required to adopt and maintain the approved SuDS that serve more than one property.
- 1.2 SuDS can provide a range of benefits, including *reducing damage from flooding, improving water quality, protecting and improving the environment, improving health and well-being, and ensuring the stability and resilience of drainage systems*. These are consistent with both the well-being goals and the sustainable development principles contained within the Well-being of Future Generations (Wales) Act 2015¹. They are also consistent with the Natural Resources Policy for Wales².
- 1.3 SuDS, in contrast to conventional piped drainage, seek to manage rainfall in a way similar to natural processes, making use of the landscape and natural vegetation to control the flow and volume of surface water. To date, the use of SuDS on new developments has been non-mandatory. As a result, the use of SuDS is limited and systems are not always compliant with SuDS Standards³. This is due, in large part, to uncertainty around adoption and ongoing maintenance.
- 1.4 This is a single explanatory memorandum for the suite of Statutory Instruments needed to implement Schedule 3 of the 2010 Act. Once commenced these instruments, together [with the relevant provisions in Schedule 3] provide for the following:
- Establish a SuDS Approving Body (SAB) in county and county borough councils.
 - Provides that drainage systems for managing rainwater (including rainwater, snow and other precipitations) for new developments must be approved by the SAB before construction begins.
 - Requires the Welsh Ministers to publish National SuDS Standards (SuDS Standards) for the design, construction, operation and maintenance of SuDS. In order to be approved by the SAB the proposed drainage system must meet the SuDS Standards.
 - Places a duty on the SAB to adopt and maintain approved SuDS that serve more than one property. In order to be adopted by the SAB the drainage system must be constructed and function as approved in accordance with the SuDS Standards.
 - Inserts a new section 106A into the Water Industry Act 1991 which supplements the existing provisions in section 106 of that Act making the right to connect

¹ Welsh Government (2015) Well-being of Future Generations (Wales) Act 2015

² Welsh Government (2017) Natural Resources Policy

³ Welsh Government (2016) Recommended non-statutory standards for sustainable drainage (SuDS) in Wales

surface water to public sewers conditional on the drainage system being approved by the SAB as meeting the SuDS Standards.

- Sets out Sewerage Undertakers, Natural Resources Wales, British Waterways and Highway Authorities as statutory consultees to the SAB.
- Establishes a SAB enforcement and appeals regime.
- Provides a mechanism for the recovery of reasonable costs incurred by the SAB in carrying out its function.

1.5 The Order commencing Schedule 3 of the Flood and Water Management Act 2010 for Wales was made on 1 May 2018. The legislation, along with the regulations necessary for its implementation, will come into effect on 7 January 2019. This is to give sufficient time to local authorities to establish the SAB approval mechanism. It is also to give developers time to become aware of the changes and prepare for mandatory SuDS Standards and the requirement for SAB approval before beginning construction.

1.6 It is proposed that the requirement for SAB approval will not apply to single dwellings and developments with a construction area of less than 100 square meters.

1.7 Transitional provisions have been inserted so that after the coming into force date SAB approval will not be required for the following:

- New developments that were already granted planning permission before the coming into force date, or
- New developments with one or more reserve matters where an application for approval of the reserve matter(s) is made within the period of 12 months after the coming into force date, or
- New developments where a valid planning application has been submitted before the coming into force date.

1.8 Exemption provisions have been inserted so that SAB approval will not be required for the following:

- Construction related to major roads (built by the Welsh Government), Network Rail railways and activities of internal drainage boards (delivered by Natural Resources Wales).
- Permitted developments which involve the construction of a building or other structure covering an area of land of less than 100 square meters.

2. Matters of special interest to the Constitutional and Legislative Affairs Committee

2.1 The 2010 Act is an existing UK Act of Parliament, these Statutory Instruments together are needed to implement Schedule 3 of the 2010 Act in Wales and apply only to Wales. The Flood and Water Management Act 2010 (Commencement no.2) (Wales) Order 2018 was made on 1 May 2018. The Order commenced Schedule 3 of the Act with effect from the day after the day on which it was made, for the purpose of making subordinate legislation, and for remaining purposes with effect from 7 January 2019.

2.2 Schedule 3 of the 2010 Act could apply in England but has not been commenced. SuDS measures in England remain under review by the UK Government and have been the subject of scrutiny by the Environment, Food and Rural Affairs (EFRA) Parliamentary Committee. The Committee concluded the UK Government's policy on SuDS is failing and made recommendations on the need to make standards for SuDS mandatory to improve the quality of SuDS schemes.

2.3 The UK Government has since published a review⁴ on the application and effectiveness of its approach, which seeks to implement SuDS on major new developments and to prioritise the use of SuDS in areas at risk of flooding through non statutory planning policy. A number of findings have emerged as summarised below:

:

- 80% of adopted Local Planning Authorities (LPAs) local plan policies reflected the policy that SuDS are to be provided in major new developments.
- 70-75% of LPAs have **no** monitoring or reporting of the take-up of SuDS.
- A considerable number of LPAs reported their time, expertise and resources were under pressure with assessing planning applications.
- The report noted that Lead Local Flood Authorities (LLFAs) were concerned that SuDS were not being incorporated at the master planning stage, with a lack of detail and consideration at early planning.
- The report noted a shortfall where LPAs are not ensuring that maintenance arrangements for SuDS schemes are put in place for the life-time of the development.

3. Legislative background

3.1 Schedule 3 of the 2010 Act is given effect by Section 32 of that Act. Section 49(3)(i) of the 2010 Act provides that Section 32 and Schedule 3 come into force in relation to Wales in accordance with provisions made by order of the Welsh Ministers.

3.2 Schedule 3 of the 2010 Act confers powers on the Welsh Ministers to make subordinate legislation in relation to Wales on a number of matters:

- Paragraph 7(4) contains provision amongst other things, for regulations to be made about exemptions to the requirement for approval. Paragraph 11(5) provides for regulations to be made about timing and procedure for determination of applications for approval, including the consequences of failure to comply with them.
- Paragraph 13(1) requires regulations to be made for fees for applications for approval.
- Paragraph 18(3) provides that regulations may be made for determining when a drainage system is to be treated as designed for a single property. Paragraph 20 provides that additional exceptions to the adoption duty may be made by Order.

⁴ <https://www.gov.uk/government/publications/a-review-of-the-application-and-effectiveness-of-planning-policy-for-sustainable-drainage-systems>

Paragraph 23(7) and 24(5) provide that regulations may be made about the timing and manner of notice given by the SAB concerning adoption.

- Paragraph 14(1) requires an order to be made for the enforcement of the requirement for approval.
- Paragraph 25(1) requires regulations to be made providing a right of appeal against certain decisions made by the SAB.

3.3 The Assembly legislative procedure for making the instruments is as follows:

- By virtue of section 48(5) of the 2010 Act, the Sustainable Drainage (Approval and Adoption) (Wales) Order 2018, The Sustainable Drainage (Approval and Adoption Procedure) (Wales) Regulations 2018, and The Sustainable Drainage (Application for Approval Fees) (Wales) Regulations 2018 follow the negative resolution procedures.
- By virtue of section 48(6)(a) of, and paragraphs 14(5)(b) and 25(3)(b) of Schedule 3 to the 2010 Act, the Sustainable Drainage (Enforcement) (Wales) Order 2018 and the Sustainable Drainage (Appeals) (Wales) Regulations 2018 follow the affirmative resolution procedure.

3.4 These instruments deal with surface water drainage in Wales only. This differs from all other aspects of sewerage and drainage which are provided by sewerage undertakers under the Water Industry Act 1991 (WIA). Under the WIA, Welsh Ministers are responsible for the regulation of water and sewerage undertakers who operate wholly or mainly in Wales and the Secretary of State has responsibility for water and sewerage companies operating wholly or mainly in England. As a result, for drainage services provided by the water and sewerage undertakers, those parts of England served by Dŵr Cymru Welsh Water are the responsibility of Welsh Ministers. Related provisions in the Wales Act 2017 once commenced will align regulation of sewerage undertakers with the geographical national border, instead of wholly or mainly.

3.5 Schedule 3 of the Act uses the term “Minister” to denote both the Welsh Ministers and the Secretary of State. The term “Minister” is used in this document to denote the Welsh Ministers.

4. Purpose and intended effect

The problem the legislation seeks to address

4.1 Around 163,000 properties in Wales are at risk of surface water flooding (120,000 residential & 43,000 non-residential)⁵. The cost of damages associated with local

⁵ Natural Resources Wales Reports, Evidence and Data on Flooding:
<https://naturalresources.wales/evidence-and-data/research-and-reports/reports-evidence-and-data-on-flooding/december-floods-fact-sheet/?lang=en>

flooding events in Wales was found to be as much as £71 million for the period 2011-2014⁶.

- 4.2 The risk of flooding is increasing, largely due to climate change and urbanisation. Surface runoff can be a major source of pollution; both directly and from overwhelmed sewers discharging into rivers. Pressure to take action on water quality, for example by increasing the capacity of the sewerage system, also stems from the present need to comply with EU legislation, in particular the Water Framework Directive.
- 4.3 According to Natural Resources Wales⁷ “*there is distinct lack of ‘public clarity’ over responsibilities (‘who does what’), particularly in relation to the management of (coastal and) surface water flooding*” “the creation of sustainable drainage approval bodies” is identified as a key measure which could help improve flood risk management. **The approval and adoption of SuDS schemes by an approving body established in local authorities is an objective of the national strategy for flood risk management in Wales**⁸. Of particular concern is the current lack of clear responsibilities for maintaining and operating surface water drainage systems that are not defined as traditional piped or sewered drains that connect to the public sewer system or otherwise.
- 4.4 SuDS reduce the rate and volume of surface runoff from developments to more closely match ‘greenfield’ sites. This generally means lower or slower discharges compared with conventional piped drainage. They are a more sustainable and resilient form of drainage and typical components include ponds, permeable paving and swales⁹.
- 4.5 Schedule 3 of the 2010 Act includes a provision that requires developers to seek drainage approval from a SAB before starting any construction work that has drainage implications. The SAB must determine if the application meets mandatory SuDS Standards. Under the legislation all approved SuDS which serve more than one property must be adopted and maintained by the SAB.
- 4.6 Exemptions to the regime may be allowed by regulation and the 2010 Act specifically allows for phased commencement to manage impacts on Local Authorities and businesses.
- 4.7 The Pitt review¹⁰, which followed the 2007 floods, made specific recommendations with regards to surface runoff, including the need to:
 - Clarify the responsibility for the adoption and maintenance of sustainable drainage systems; and
 - Remove the automatic right to connect to surface public water sewers (Section 106 and Section 115 of the Water Industry Act 1991).

Which will be implemented by commencing Schedule 3 to the 2010 Act.

Why Government needs to intervene

⁹ CIRIA (2015) The SuDS Manual (C753)

¹⁰ Cabinet Office (2008) The Pitt Review: Learning the Lessons from the 2007 Floods

- 4.8 The justification for, and use of, SuDS is well established in the planning system, which includes TAN 15 and Approved Document H of the Building Regulations, as well as voluntary standards such as the Home Quality Mark. However, the current uptake of SuDS is low, limiting the potential contribution of SuDS to mitigating flood risk from surface run-off and the risk of sewer overload, or to protecting water quality.
- 4.9 In the past, most developments have been built with separate drains for foul water and surface runoff, although some 70% of the UK's sewer network is combined, so many surface water drains connect into existing combined sewers. A relatively low proportion (around 20-40% based on anecdotal evidence) can be described as SuDS that comply with national standards¹¹. The market has been slow in voluntarily integrating SuDS into development plans. The market has been constrained by:
- Information failure – currently, there is a lack of consistent use of recommended standards. Despite the existence of good practice, bad practice is also evident and contributes to a perception that SuDS are expensive and entail non-essential costs.
 - Externalities – there is a disconnect between those who manage and/or pay for surface water drainage and those who benefit from sustainable management. The benefits are often public and generally accrue further downstream, i.e. some way away from the point at which the rain falls and is dealt with.
 - Lack of a statutory requirement and coherent arrangements for the adoption and ongoing maintenance of drainage - currently, developers or local authorities have to make arrangements to finance the ongoing maintenance of SuDS, where they are built. However, the arrangements for this are highly variable and ad-hoc.
- 4.10 In addition to the constraints mentioned above, there are also weak market drivers for the management of surface water runoff:
- The legacy of draining surface water runoff into our sewers means that foul water and surface runoff are often seen as a single problem. However, over recent years there has been little change in the amount of water each person uses at home¹² i.e. little improvement in water efficiency per person. In contrast, Ofwat predict a significant increase in sewer flooding from climate change going forward¹³. Thus the influence of surface runoff (influenced by the pattern of climate change, as well as urban creep) on our sewers will increase relative to the amounts of foul water to be handled.
 - Current arrangements for flood insurance cover are highly cross-subsidised by those not at risk and this dis-incentivises the uptake of management measures, including SuDS.

Policy Objective

4.11 Commencement of Schedule 3 is intended to:

- Move provision of SuDS from a non-statutory to a statutory requirement;
- Ensure compliance with and consistency of standards for long term surface water management;
- Provide certainty for developers that SuDS will be adopted without the need for lengthy negotiation or significant expense;
- Reduce the risk of localised, surface water flooding;
- Mitigate pollution that may arise from surface water runoff;
- Reduce extra load on public sewers and the need for additional capacity; and
- Help safeguard water supplies.

4.12 Other, indirect benefits include:

- Help achieve the goals of the Well-being of Future Generations (Wales) Act 2015, and in particular the **Welsh Government Well-being Objective** to connect communities through sustainable and resilient infrastructure.
- Contribute to the commitment to take action to improve management of our water environment, made in the **Welsh Government Programme for Government 2016-2021**. This also identifies green infrastructure (such as SuDS) as an opportunity to address poverty, housing and infrastructure drivers, whilst meeting broader longer term objectives.
- Contribute to the commitment to implement nature based solutions, a national priority in the Welsh Government **Natural Resources Policy (2017)** for Wales, and related wider long-term **Prosperity for All** objectives including supporting sustainable communities, promoting green growth, supporting a more resource efficient economy and maintaining healthy, active and connected communities¹⁴.
- Contribute to the goals of the **Water Strategy for Wales**, which sets out strategic direction for water policy over the next 20 years and beyond.
- Contribute to delivering objectives of the **National Strategy of Flood and Coastal Erosion Risk Management in Wales**.
- Achieve compliance with the **Planning (Wales) Act 2015**, which imposes duties requiring “*sustainable development*” consistent with SuDS features on new developments.
- Achieve compliance with the duty to maintain and enhance bio-diversity and promote the resilience of eco-systems, established under the **Environment (Wales) Act 2016**.
- Help meet the goals of the **EU Water Framework Directive**.
- Reduce air pollution through the increased use of green infrastructure, contributing to achieving the **Air Quality Standards (Wales) Regulations 2010**.
- Help meet **Welsh Housing Quality Standards**, which state that new homes constructed for Registered Social Landlords (housing associations) for both social housing and sale on the open market must be “*located in attractive and safe*”

¹⁴ In particular, the Policy states that “increasing access to green spaces and providing community facilities to bring people together is highlighted as a ‘best buy’ to prevent mental ill health and improving mental well-being by Public Health Wales. The World Health Organisation suggests that public health approaches with health, social, economic and environmental benefits, such as safe green spaces and active transport, have been shown to be cost-effective with potential returns on investment. Studies also suggest that people living closer to good-quality green space are more likely to have higher levels of physical activity, and are more likely to use it and more frequently”.

environments”, use “soft and hard landscaping with planting in protected areas” and provide “adequate, practical and maintainable communal areas”;

- Help Wales to achieve **carbon reduction objectives**¹⁵ and adapt to climate change.
- Increase wetland habitats and urban green space contributing to the aims of the **National Biodiversity Strategy and Action Plan for Wales** (the Nature Recovery Plan for Wales) and the commitments to the **Habitats and Birds Directives**.

Why SuDS?

- 4.13 Flood damage from surface runoff is predicted to increase due to climate change and continued urbanisation¹⁶.
- 4.14 SuDS can reduce this increase by storing runoff, slowing the rate at which runoff enters water bodies and helping runoff infiltrate into the ground. In case studies SuDS has been shown in particular circumstances to reduce runoff by as much as 50%¹⁷.
- 4.15 The majority of towns and cities in Wales were constructed with combined sewers where surface runoff mixes with foul water and is then transported to a treatment plant that extracts clean water. In around half of the network, current sewerage systems are at or beyond capacity.
- 4.16 In these situations, during periods of intense rain, the combined sewers quickly become full. When this happens, untreated sewage and foul water discharges to streams and rivers through engineered overflows (intended to prevent similar flooding in properties). During floods, this will combine with flood waters and in a small number of cases it can also flood homes directly.
- 4.17 The extent of legal discharges is limited by Natural Resources Wales permits and is constrained by the following directives:
- Bathing Water Directive;
 - Shellfish Directive;
 - Water Framework Directive; and
 - Urban Waste Waters Treatment Directive.
- 4.18 The sewage network in England and Wales is valued at around £174 billion, substantial additional sewerage capacity is needed to address the predicted increase in flooding due to climate change, urban creep and new connections. However if new connections were not made (through introducing SuDS) this will reduce the pressures on the sewers which could save billions in investment from water and sewerage companies.

¹⁵ Consistent with the advice set out Committee on Climate Change (2017) Advice on the Design of Welsh Carbon Targets

¹⁶ The Welsh Government National Strategy for Flood and Coastal Erosion Risk Management 2011 <https://gov.wales/docs/desh/publications/111114floodingstrategyen.pdf>

¹⁷ See for example EPC (2017) Sustainable Drainage Systems on new developments, analysis of evidence <https://gov.wales/docs/desh/publications/170209-suds-evidence-epc-final-report-en.pdf>

4.19 SuDS provide an opportunity to avoid many of the new connections and to develop an alternative infrastructure to public sewers – offering significant savings in investment.

5. Consultation

5.1 In developing the evidence to support the Regulatory Impact Assessment (RIA)¹⁸, consultation has taken place with a wide range of organisations and sectors, including:

- Local authorities
- Developers and home builders
- Water and sewerage companies
- Natural Resources Wales
- Non-government organisations and the third sector
- Consumer bodies
- Academia
- Sector professionals

5.2 The RIA has been completed alongside this Explanatory Memorandum. Further details of the consultations undertaken are included in the RIA below (Part 2).

¹⁸ See for example EPC (2017) Sustainable Drainage Systems on new developments, analysis of evidence <https://gov.wales/docs/desh/publications/170209-suds-evidence-epc-final-report-en.pdf>.

Annex 2 – Commercial and industrial development

Annex 3 – Developers in Wales

6. Policy options considered

6.1 The Welsh Government has considered three main policy options (Table 1).

Table 1: Summary of policy options considered

Policy option	Name	Description
1	Do nothing	The baseline option, involving continuation of current non-regulatory policy.
2	Commence Schedule 3	Mandatory use of SuDS compliant with national standards on all minor and major development (more than 1 dwelling or sites larger than 0.1 hectares).
3	Planning approach	Expectation that SuDS will be provided on all minor and major development wherever this is appropriate and unless demonstrated to be inappropriate. Use of planning conditions or planning obligations to ensure that there are clear arrangements in place for ongoing maintenance over the lifetime of the development.

6.2 In addition to the three options outlined above, a number of other options were discussed but excluded from full consideration in the RIA. However, some of these may not be inconsistent with the policy options set out above, and these are discussed in the broader consultation paper. These options, and the reason for their exclusion, are shown in Table 2.

Table 2: Options discussed but excluded from full consideration in RIA

Option	Description	Reason for exclusion
Water company adoption	Water and sewerage company (WaSC) required to adopt, and responsible for maintaining, certain SuDS (e.g. below ground, proprietary) compliant with standards.	Options for voluntary adoption of SuDS and maintenance by water company are considered in the broader consultation paper. Non-voluntary adoption would need a change in primary legislation (S104 of the Water Industry Act 1991), and legislation to remove automatic right to connect. Creates incentive to install systems where adoption more certain (likely to be below ground, as in Scotland).
Amended Schedule 3	SAB established for SuDS approval, but SuDS adopted by different groups, such as local authority, WaSC or housing association,	Options for amending Schedule 3, e.g. through regulations and orders, are discussed in broader consultation paper.

	depending on functionality, benefits, etc.	High risk of differing approaches in different areas and duplication of standards. Also proliferation of bodies with SuDS responsibilities likely to create confusion.
Sewers for adoption	Update Sewers for Adoption (guidance for design and construction of sewers that will be adopted by Sewerage Undertakers in accordance with Section 104 of the Water Industry Act 1991) to include SuDS.	No mandatory requirement, so unlikely to significantly change current situation.

What is the preferred option?

- 6.3 Option 2 is the preferred option. The NPV (net present value) for Option 2 is estimated to be £164.9m (range £82.6m to £961.4m). It is positive suggesting that the net benefits to society outweigh the net costs to society. The NPV for Option 1 is zero. The NPV for Option 3 is estimated to be £54.3m, i.e. around one-third of the benefits of the preferred option (although the range at £20.4m to £460.4m overlaps with Option 2).

7. Cost benefit analysis of options

- 7.1 We have used guidance provided by HM Treasury¹⁹ to carry out a Cost Benefit Analysis (CBA) for the three policy options.
- 7.2 The appraisal period is assumed to run from 2018 to 2026. The final year (2026) was chosen as this correlates with the end-point of many of the local development plans in Wales, i.e. there is greater certainty regarding the scale and extent of housing and other development over this period. Of course, a longer appraisal period could be justifiable and may be appropriate, although the scale and extent of new development and exogenous changes would be more uncertain. Nevertheless, adopting a longer period would give greater importance to those impacts recurring over time. This is examined through sensitivity analysis.
- 7.3 The impacts of the options have been classed as either:
- One-off – impacts are assumed at the start of the appraisal period (2018); or
 - Recurring – impacts are assumed to occur each year (from 2018 to 2026 inclusive).

¹⁹ HM Treasury (2011) Green Book

- 7.4 In accordance with HM Treasury guidance, a discount rate of 3.5% has been applied to future costs and benefits, in order to calculate the present value (PV) of the impacts. Changing this rate is examined through sensitivity analysis.
- 7.5 Total estimated figures given throughout the RIA are rounded so may not sum precisely with values in supporting tables.
- 7.6 The focus in the RIA is on additional/marginal costs and benefits associated with options 2 and 3. Therefore, any costs/benefits under Option 1 (the 'Do Nothing' option) are not additional to current situation and are assumed to be zero.
- 7.7 The costs and benefits accruing to a number of key groups and organisations have been considered. These are
- Welsh Government
 - Local authorities/SABs
 - Developers
 - Water and sewerage companies
 - Property owners/occupiers
 - Natural Resources Wales
 - General population
- 7.8 The specific impacts considered in the RIA draws on engagement with stakeholders, a range of previous work, including Defra (2010)²⁰, the SuDS Manual²¹ and the CIRIA Benefits of SuDS Tool (BeST), and expert knowledge. The full list of impacts considered is shown in Table 3.

Table 3: Impacts considered (full list)

Potential impacts	Description
Construction	Construction of compliant SuDS
Fees (developers)	Application/approval/certification/inspection/adoption fee
Land take	Additional land take from SuDS
Start-up (developers)	Capacity building, upskilling and training
Connection charges (developers)	Avoided surface water connection applications/charges
Adoption, O&M (developers)	Reduced operation and monitoring (O&M), and certainty of adoption, leading to efficiencies in planning process and development, as well as reduced or simplified interaction with a complex array of interests, including the WaSC, Planning

²⁰ Commencement of the Flood and Water Management Act 2010, Schedule 3 for Sustainable Drainage: Impact Assessment

²¹ CIRIA (2015) The SuDS Manual (C753)

	Authority, Highways Authority and NRW.
Start-up (local authorities/SABs)	Establish SAB, including administration, accounting, legal fees, registration charges, advertising, promotional activity, engagement, employee training, etc
O&M (local authorities/SABs)	Operation and maintenance of SuDS
Adoption (local authorities/SABs)	Additional duty/responsibility to maintain, potentially offset by reduced risk from orphaned or abandoned schemes
Revenue (local authorities/SABs)	Revenue from application/approval fees
Monitoring & enforcement (local authorities/SABs)	All aspects of monitoring and enforcement of SuDS, including appeals and ensuring proper functioning (e.g. porous pavements and soakaways)
Consultation (local authorities/SABs)	Additional costs of consultation as LLFAs become statutory consultee on all planning applications in relation to surface water drainage. Also, costs of additional planning conditions/funding agreements for construction and maintenance of the drainage system on all developments.
Consultation (others)	Additional costs of consultation on planning applications for statutory and other consultees. It is likely that most consultation requirements will be dealt with through standing advice, as with existing planning processes. Therefore, no significant additional costs are expected as a result of the proposed changes.
Asset base (WaSC)	Opportunity cost of foregone increase in asset base, on which companies can earn a return
Connection charges (WaSC)	Reduced revenue from surface water connection applications/charges
Infrastructure	Reduced/deferred future investment need in sewerage infrastructure, reduced O&M costs for conventional sewers (e.g. pumping, treatment) and improved ability to take an integrated approach to urban water systems.
Monitoring & enforcement (WaSC)	Reduced need for monitoring and enforcement of sewer connections
Surface water charges	Reduction in charges paid by property owners/occupiers for surface water drainage
Flood risk	Avoided damage and associated impacts (e.g. on psychological health) from reduced flood risk
Amenity	Enhanced attractiveness and liveability of developments

O&M (property owners/occupiers)	Added responsibilities for surface water in curtilage
Building temperature	Impact of SuDS on cooling (summer) or insulation (winter)
Crime	Reduced crimes against property or people
Traffic calming	Risk of road accidents or street-based recreation opportunities
Infraction	Avoided risk of infraction of water quality related EU directives
Growth	Economic growth
Enabling development	Contribution to affordable housing targets
Appeals	Costs of establishing and running Planning Inspectorate (PINS) to deal with appeals
Wider benefits	Related to goals in the Well-being of Future Generations Act 2015, including prosperous, resilient, healthier Wales, etc
Rainwater harvesting	Reduced flows, pollution or mains consumption
Tourism	Attractiveness of tourist sites
Regulation	Improved ability of NRW to tackle diffuse pollution, surface water flood risk and deliver ecosystem benefits
Flood risk	Increased risk of flooding in public areas (e.g. roads) due to exceedance
Biodiversity	New or enhanced habitats and opportunities for wildlife
Carbon	Reduction or sequestration of greenhouse gas emissions resulting from reduced pumping/treatment or new/additional planting
Education	Increased opportunities for learning and development
Climate change	Enhanced ability to mitigate or adapt to the expected impacts of climate change
Water quantity	Additional surface or groundwater available for abstraction, or to help alleviate drought/water scarcity
Health	Improved health and well-being due to increased/enhanced access and use of green space or, depending on type of SuDS used, improved air quality and temperature regulation (e.g. using green roofs)
Recreation	Improved or enhanced recreational opportunities (e.g. walking, fishing, watersports)
Water quality	Reduced sewer/surface water overflows and natural infiltration of surface water before it enters watercourses, leading to improved

	or enhanced water quality of surface, ground, transitional or coastal waters, consistent with objectives of Water Framework Directive
--	---

7.9 A proportionate approach has been taken, with the impacts above ‘screened’ for significance. Where costs and benefits are likely to be small, or impacts considered likely to affect only a few organisations/firms, or many organisations/firms to a very small degree, these have not been valued. Significant environmental and social impacts have been valued using BeST.

7.10 In many cases, there is no overall net change anticipated, although some degree of redistribution (a ‘transfer’ of costs and benefits from one group to another) is expected. In these cases, the effects have been assessed in the RIA.

7.11 For the purposes of the RIA, which is concerned with net impacts across the economy, aggregated estimates of costs and benefits across the country are appropriate. However, we recognise that individual groups and organisations associated with the list in paragraph 7.7 will be impacted differently by the proposals.

7.12 Each valued impact in the RIA comprises two components:

- A quantified estimate of the annual impact; and
- A monetary unit value.

These are multiplied together to calculate a monetised annual value for each significant impact. Where possible, low and high estimates for each component are considered (as well as the central or best estimate). As a result, the RIA includes a range for each monetised annual value. Further sensitivity analysis, considering changes to the key parameters of the discount rate and the assessment period, has also been undertaken.

7.13 In the analysis and presentation that follows, positively valued impacts indicate a benefit, whilst impacts with a negative value indicate a cost.

Assumptions

7.14 The key assumptions applied in undertaking the RIA are set out in Table 4.

Table 4: Key assumptions in RIA

General assumptions	
1	Administrative changes expected to be cost neutral
2	All valued impacts are presented as benefits. Therefore, costs appear as negative values.
3	Significant wider benefits assessed using BeST. These include amenity, education and carbon.
4	Commercial and industrial developments include those over 0.1ha (1,000m ²).

5	Benefits are assumed to start accruing from 2018, the first year of the appraisal period.
6	The timescale for the assessment is 2026, to maintain consistency with the end date for the majority of local development plans in Wales.
7	Historic values have been updated to 2016 prices using Bank of England online inflation calculator.
8	Weighted average salary and salary-related costs for employers (e.g. NI contributions), of SAB officer ranges from £30,369 (av salary of civil engineer) to £61,467 (Defra, 2010) (£72,326 in 2016 prices), mean (central) £51,348. Salaries likely to vary across Wales.
9	SAB running costs - Based on Defra (2010), we assume 1 Full Time Employee (FTE) per 100 major or 150 major and minor drainage applications/ year.
10	The average number of applications requiring SAB approval will be between 100 and 150 (central estimate 125) per year (though recognising that individual local authorities may see significantly fewer or more applications than this average).
11	Current situation (baseline) includes compliant SuDS on 20% to 40% of new development. Anecdotal evidence suggests that this may be optimistic (so the benefits of the two policy options may be larger than those estimated here).
12	Planning option will lead to compliant SuDS on 30% (low), 40% (central) or 50% (high) of new development
13	Estimates for projections for housing development are set out in Annex 1, and for commercial and industrial development in Annex 2. These projections are generally higher than actual construction over recent years and, as such, may be challenging to achieve.
14	Evidence relating to costs of construction and operation are largely based on EPC (2017) report. This report is based on a comparison of the costs of SuDS and non-SuDS approaches at an overall scheme/development level, rather than the costs of specific or individual measures or technologies.

Option 1: Do nothing

- 7.15 This is the baseline option and involves a continuation of current non-regulatory policy.
- 7.16 Although there will be costs and benefits associated with this option (for example due to urban growth or climate change), they are assumed to impact on all options equally. Therefore, they are not considered to be additional and are not analysed in the RIA.

Option 2: Commence Schedule 3

- 7.17 This is the preferred option and involves the mandatory use of SuDS compliant with national standards on all minor and major development (more than 1 dwelling or sites larger than 0.1 hectares).
- 7.18 A summary of the impacts considered likely under Option 2 is shown in Table 5 below. This also includes the group impacted, a description of the impact, whether the impact is likely to be a cost or a benefit to the impacted group, whether the impact is one-off or recurrent, whether it has been valued and comments setting out the reasons for this.

Table 5: Impacts of Option 2

Group	Impact	Description	Cost or Benefit?	One-off or recurrent?	Value in RIA?	Comments
Developers	Construction	Construction of compliant SuDS	Benefit	Recurrent	Yes	Evidence from EPC (2017) report ²² suggests capital costs are lower for compliant SuDS than for conventional systems. Some of this benefit may accrue to water and sewerage companies, so could also be some redistributive impact.
	Fees	Application/approval/certification/inspection/adoption fee	Cost	Recurrent	Yes	Administrative changes expected to be cost neutral, so costs will be offset by SAB revenue and no overall net change. However, will be redistributive impact so effects need to be assessed.
	Land take	Additional land take from SuDS	Cost	Recurrent	Yes (sensitivity only)	CIWEM (2017) concludes that " <i>We consider that arguments for not delivering SuDS on the basis of site constraints may be overstated... with good planning there may be no additional requirement for land or that the additional land needed for SuDS can be small and affordable</i> ". If SuDS are planned into developments from the outset, and there is clarity of requirements for SuDS in the planning process, there appears to be no impact on the number of units, and this appears to be a perceived cost which is therefore not valued. However, evidence subsequently provided by the House Builders Federation (HBF), based on information previously provided to Defra, suggests there are examples where SuDS have reduced number of units on developments. This evidence is therefore used for sensitivity analysis.
	Start-up	Capacity building, upskilling and training	Cost	One-off	Yes	Include in RIA

²² <https://gov.wales/docs/desh/publications/170209-suds-evidence-epc-final-report-en.pdf>

	Connection charges	Avoided surface water connection applications/charges	Benefit	Recurrent	Yes	May be offset by any potential reduction in water and sewerage company revenue.
	Adoption, O&M	Reduced O&M, and certainty of adoption, leading to efficiencies in planning process and development, as well as reduced/simplified interaction with a complex array of interests, including the WaSC, Planning Authority, Highways Authority and NRW	Benefit	Recurrent	No	Not enough evidence to identify or quantify impact robustly.
Local authorities/SABs	Start-up	Establish SAB, including administration, accounting, legal fees, registration charges, advertising, promotional activity, engagement, employee training, etc	Cost	One-off	Yes	Include in RIA
	O&M	Operation and maintenance of SuDS	Benefit	Recurrent	Yes	Evidence from EPC report suggests O&M costs are lower for compliant SuDS than conventional systems (so no increase in commuted sums paid to local authorities is expected). Some of this benefit may accrue to water and sewerage companies, so could be some distributional impact.
	Adoption	Additional duty/responsibility to maintain, potentially offset by reduced risk from orphaned or abandoned schemes	Cost or benefit	Recurrent	No	Not enough evidence to identify or quantify impact robustly.
	Revenue	Revenue from application/approval fees	Benefit	Recurrent	Yes	Administrative changes expected to be cost neutral, so benefits will be offset by developer costs and no overall net change. However, will be redistributional impact so effects need to be assessed.
	Monitoring & enforcement	All aspects of monitoring and enforcement of SuDS, including appeals and ensuring proper functioning (e.g. porous pavements and soakaways)	Cost	Recurrent	Yes	May be offset by any potential increase in water and sewerage company revenue.
	Asset base	Opportunity cost of foregone increase in asset base, on which companies can earn a return	Cost	Recurrent	No	Any savings to companies would be returned to customers through regulatory process, resulting in no net gain.
Water and sewerage companies	Connection charges	Reduced revenue from surface water connection applications/charges	Cost	Recurrent	No	Under this option, most developments would still connect to the foul/combined public sewer, so it is likely that water and sewerage companies would still need to consent and charge for connections and inspection (although companies could see

						reduction in adoption fees). Any potential impacts therefore not valued.
	Infrastructure	Reduced/deferred future investment need in sewerage infrastructure, reduced O&M costs for conventional sewers (e.g. pumping, treatment) and improved ability to take an integrated approach to urban water systems.	Benefit	Recurrent	No	Already largely captured in construction benefit to developers and O&M benefit to local authorities/SABs
	Monitoring & enforcement	Reduced need for monitoring and enforcement of sewer connections	Benefit	Recurrent	No	Under this option, most developments would still connect to the foul/combined public sewer, so it is likely that water and sewerage companies would still have the same asset base and still need to undertake the same level of inspection, monitoring and enforcement. Any potential impacts therefore not valued.
Property owners/occupiers	Surface water charges	Reduction in charges paid for surface water drainage	Benefit	Recurrent	No	Any reduction in charges paid to water and sewerage company likely to be offset by development management charge, so no overall impact.
	Flood risk	Avoided damage and associated impacts (e.g. on psychological health) from reduced flood risk	Benefit	Recurrent	No	Any benefit should be equal for both SuDS and piped systems (unless standards are higher for properties than for sewers, which is unlikely). Therefore, no net benefit anticipated.
	Amenity	Enhanced attractiveness and liveability of developments	Benefit	Recurrent	Yes	Valued in BeST using estimates of willingness of pay of residents for 'street improvements through greening'. These may capture elements of other benefits to the wider population (particularly biodiversity, health, recreation and water quality), so these are not valued separately due to risk of double counting.
	O&M	Added responsibilities for surface water in curtilage	Cost	Recurrent	No	Unlike pipes, SuDS cannot be ignored and, although this may be perceived as an additional cost/nuisance (at least initially), it could equally be a benefit as there is less likelihood/consequence of problems from SuDS. So overall, no net impact assumed.

	Building temp	Impact of SuDS on cooling (summer) or insulation (winter)	Benefit	Recurrent	No	Not enough evidence to identify or quantify impact robustly.
	Crime	Reduced crimes against property or people	Benefit	Recurrent	No	Not enough evidence to identify or quantify impact robustly.
	Traffic calming	Risk of road accidents or street-based recreation opportunities	Benefit	Recurrent	No	Not enough evidence to identify or quantify impact robustly.
Welsh Government	Infraction	Avoided risk of infraction of water quality related EU directives	Benefit	Recurrent	No	Not enough evidence to identify or quantify impact robustly.
	Growth	Economic growth	Benefit	Recurrent	No	Not enough evidence to identify or quantify impact robustly.
	Enabling development	Contribution to affordable housing targets	Benefit	Recurrent	No	Any reduced housing construction costs already counted (under 'developers') and could be offset by possible reduced housing densities (also counted under 'developers')
	Appeals	Costs of establishing and running Planning Inspectorate (PINS) to deal with appeals	Cost	Recurrent	No	PINS work funded by cost recovery on case-by-case basis. No 'set-up' costs or impacts on Welsh Government.
	Wider benefits	Related to WBFG Act goals, including prosperous, resilient, healthier Wales, etc	Benefit	Recurrent	No	Overlaps with impacts on 'general population', so high risk of double counting if included here.
	Rainwater harvesting	Reduced flows, pollution or mains consumption	Benefit	Recurrent	No	Not enough evidence to identify or quantify impact robustly.
	Tourism	Attractiveness of tourist sites	Benefit	Recurrent	No	Not enough evidence to identify or quantify impact robustly.
NRW	Regulation	Improved ability to tackle diffuse pollution, surface water flood risk and deliver ecosystem benefits	Benefit	Recurrent	No	Not enough evidence to identify or quantify impact robustly.
General population	Flood risk	Increased risk of flooding in public areas (e.g. roads) due to exceedance	Cost	Recurrent	No	Likely to be offset by any reduced risk of hydraulic overload flooding resulting from lower volumes in sewerage system
	Biodiversity	New or enhanced habitats and opportunities for wildlife	Benefit	Recurrent	No	Not valued due to potential for double counting with amenity benefit to property owners/occupiers.
	Carbon	Reduction or sequestration of greenhouse gas emissions resulting from reduced pumping/treatment or new/additional planting	Benefit	Recurrent	Yes	Include in RIA
	Education	Increased opportunities for learning and development	Benefit	Recurrent	Yes	Include in RIA
	Climate change	Enhanced ability to mitigate or adapt to the expected impacts of climate change	Benefit	Recurrent	No	Not enough evidence to identify or quantify impact robustly.

Water quantity	Additional surface or groundwater available for abstraction, or to help alleviate drought/water scarcity	Benefit	Recurrent	No	Not enough evidence to identify or quantify impact robustly.
Health	Improved health and well-being due to increased/enhanced access and use of green space or, depending on type of SuDS used, improved air quality and temperature regulation (e.g. using green roofs)	Benefit	Recurrent	No	Not valued due to potential for double counting with amenity benefit to property owners/occupiers.
Recreation	Improved or enhanced recreational opportunities (e.g. walking, fishing, watersports)	Benefit	Recurrent	No	Not valued due to potential for double counting with amenity benefit to property owners/occupiers.
Water quality	Reduced sewer overflows and natural infiltration of surface water before it enters watercourses, leading to improved or enhanced water quality of surface, ground, transitional or coastal waters, consistent with objectives of Water Framework Directive	Benefit	Recurrent	No	Not valued due to potential for double counting with amenity benefit to property owners/occupiers.

7.19 Table 6 summarises the PV impacts for Option 2. Each valued impact is considered, in turn, below Table 6. The NPV for Option 2 is estimated to be £164.9 million (range £82.6m to £961.4m). It is positive suggesting that the net benefits to society outweigh the net costs to society.

Table 6: Summary table of PV impacts for Option 2 (2018-2026)

Group	Impact	Total PV impact (£ million)		
		Low	Central	High
Developers	Construction	80.3	160.5	955.9
	Fees	- 9.9	- 14.1	- 19.0
	Start-up	- 0.1	- 0.3	- 0.5
	Connection charges	5.6	15.0	27.5
Local authorities/SABs	Start-up	- 0.4	- 0.5	- 0.6
	O&M	- 0.1	0.2	0.3
	Revenue	9.9	14.1	19.0
	Monitoring & enforcement	- 5.0	- 15.3	- 29.9
Property owners/occupiers	Amenity	2.1	4.7	7.5
General population	Carbon	0.1	0.3	0.6
	Education	0.1	0.2	0.6
	TOTAL	82.6	164.9	961.4

7.20 Developers: Construction of SuDS

The annual impact on developers associated with the construction of SuDS is as follows.

Residential

Low: £9,594,000
 Central: £19,597,000
 High: £117,083,000

Commercial and industrial

Low: £606,000
 Central: £785,000
 High: £4,315,000

These estimates are based on the information provided in Table 7.

Table 7: Impact on developers: Construction of SuDS

		Value	Units	Source	Assumptions
Quantified estimate of impact (residential)	Low	5,220	New homes per year	Public Policy Institute for Wales (2015) ²³	Assume compliant SuDS currently on 20-40% of new developments, so option applies to additional 60% (low), 70% (central) and 80% (high) of new development ²⁴ .
	Central	10,010		Housing White Paper (2012) ²⁵	
	High	12,946		Information from local development plans provided by WG (March, 2017)	
Monetary value (residential)	Low	1,838	Capex saving per unit £	EPC (2017) ²⁶	Outliers removed
	Central	1,958			Median value
	High	9,044			Mean value
Quantified estimate of impact (commercial & industrial)	Low	330	New developments per year	New industrial and commercial orders for construction 2018-2026 (min) ²⁷	Assume compliant SuDS currently on 20-40% of new developments, so option applies to additional 60% (low), 70% (central) and 80% (high) of new development.
	Central	401		As above (mean)	
	High	477		As above (max)	
Monetary value (commercial & industrial)	Low	1,838	Capex saving per unit £	EPC (2017)	Outliers removed
	Central	1,958			Median value
	High	9,044			Mean value

7.21 Developers: SAB fees

The annual impact on developers associated with SAB fees is as follows.

Low:	- £1,254,000
Central:	- £1,787,000
High:	- £2,409,000

These estimates are based on the information provided in Table 8.

²³ Public Policy Institute for Wales (2015) Future Need and Demand for Housing in Wales

²⁴ The figures in the 'value' column have been adjusted to reflect the assumption (low value multiplied by 0.6, central by 0.7 and high by 0.8).

²⁵ Based on Holmans, A. and Monk, S. (2010) Housing need and demand in Wales 2006–2026. Social Research Number 03/2010. Cardiff: Welsh Government

²⁶ Sustainable Drainage Systems on new developments, Analysis of evidence including costs and benefits of SuDS construction and adoption. Final Report for the Welsh Government, January 2017. This report is based on a comparison of the costs of SuDS and non-SuDS approaches at an overall scheme/development level, rather than the costs of specific or individual measures or technologies. It also encompasses all expected capital costs (e.g. off-site disposal of excavation arisings).

²⁷ ONS, NEWOGOR New Orders for Construction: by Government Office Region (Wales), accessed April 2017

Table 8: Impact on developers: SAB fees

		Value	Units	Source	Assumptions
Quantified estimate of impact	Low	2,100	Applications per year	Consultation with local authorities	Average number of applications requiring SAB approval (though recognising that individual local authorities may see significantly fewer or more applications than this average). Low 100, central 125, high 150, across 21 local authorities
	Central	2,625			
	High	3,150			
Monetary value	Low	- 597	Fee per application	Defra (2010)	Original value (£507) updated to 2016 prices
	Central	- 681			Average of low and high
	High	- 765			Original value (£650) updated to 2016 prices

7.22 Developers: start-up

The one-off impact on developers associated with start-up costs is as follows.

Low:	- £76,766
Central:	- £259,593
High:	- £548,472

These estimates are based on the information provided in Table 9.

Table 9: Impact on developers: start-up

		Value	Units	Source	Assumptions
Quantified estimate of impact	Low	4,550	Total days	WG analysis of IDBR (see Annex 2)	Number of developers (910) assumed to be those involved in 'Development of building projects'. We assume each developer invests 5 (low), 10 (central) or 15 (high) person-days of transitional, one-off time (for training, skills, etc)
	Central	9,100			
	High	13,650			
Monetary value	Low	- 16.9	Cost per day	Defra (2010)	Annual salary/related costs of staff: Min £30,369 (av salary of civil engineer), max £61,467 (£72,326 in 2016 prices), mean (central) £51,348. Assume
	Central	- 28.5			
	High	- 40.2			

					1,800 days per FTE p.a. (8 hours/day x 5 days/week x 45 weeks/year)
--	--	--	--	--	---

7.23 Developers: connection charges avoided

The annual impact on developers associated with connection charges is as follows.

Low:	£716,000
Central:	£1,905,000
High:	£3,499,000

These estimates are based on the information provided in Table

10. *Table 10: Impact on developers: Connection charges*

		Value	Units	Source	Assumptions
Quantified estimate of impact	Low	2,100	Applications per year	Consultation with local authorities	Average number of applications requiring SAB approval (though recognising that individual local authorities may see significantly fewer or more applications than this average). Low 100, central 125, high 150, across 21 ²⁸ local authorities
	Central	2,625			
	High	3,150			
Monetary value	Low	341	Charge per development	Defra (2010), using data from DCWW ²⁹ and SVT ³⁰	Assume each development with compliant SuDS would save one application charge, one sewer connection charge and inspection charge. For DCWW and SVT, these are, respectively: £155 (DCWW) and £114.90 (SVT); £183 (DCWW) and £455.67 (SVT); £43 (DCWW) and £500 (SVT). We take the average of each to generate a central value (£135 + £319 + £272 = £726), and low and high estimates for each to generate low (£341) and high (£1,111).
	Central	726			
	High	1,111			

²⁸ Based on the local authorities listed in Annex 1

²⁹ Developer services schedule of charges 2016-17

³⁰ Developer charges 2015/16

7.24 Local authorities/SABs: start-up

The one-off impact on local authorities/SABs associated with start-up costs is as follows.

Low:	- £420,000
Central:	- £525,000
High:	- £630,000

These estimates are based on the information provided in Table

11. *Table 11: Impact on local authorities/SABs: start-up*

		Value	Units	Source	Assumptions
Quantified estimate of impact	Low	21	Number of local authorities	-	-
	Central	21			
	High	21			
Monetary value	Low	- 20,000	Cost per local authority	Consultation with local authorities	Cost of 1 FTE for approx 3 months, plus additional set-up costs (e.g. IT, training)
	Central	- 25,000			
	High	- 30,000			

7.25 Local authorities/SABs: Operation and maintenance of SuDS

The annual impact on local authorities/SABs associated with the operation and maintenance of SuDS is as follows.

Residential

Low:	- £13,000
Central:	£29,000
High:	£38,000

Commercial and industrial

Low:	- £813
Central:	£1,000
High:	£1,000

These estimates are based on the information provided in Table 12.

Table 12: Impact on local authorities/SABs: Operation and maintenance of SuDS

		Value	Units	Source	Assumptions
Quantified estimate of impact (residential)	Low	5,220	New homes per year	Public Policy Institute for Wales (2015)	Assume compliant SuDS currently on 20-40% of new developments, so option applies to additional 60% (low), 70% (central) and 80% (high) of new development.
	Central	10,010		Housing White Paper (2012)	
	High	12,946		Information from local development plans provided by WG (March, 2017)	
Monetary value (residential)	Low	- 2.5	Opex saving per unit £	EPC (2017)	Median value
	Central	2.9			Outliers removed
	High	2.9			Mean value
Quantified estimate of impact (commercial & industrial)	Low	330	New developments per year	New industrial and commercial orders for construction 2018-2026 (min)	Assume compliant SuDS currently on 20-40% of new developments, so option applies to additional 60% (low), 70% (central) and 80% (high) of new development.
	Central	401		As above (mean)	
	High	477		As above (max)	
Monetary value (commercial & industrial)	Low	- 2.5	Opex saving per unit £	EPC (2017)	Median value
	Central	2.9			Outliers removed
	High	2.9			Mean value

7.26 Local authorities/SABs: Revenue from application/approval fees

The annual impact on local authorities/SABs associated with revenue from application/approval fees is as follows.

Low: £1,254,000

Central: £1,787,000

High: £2,409,000

These estimates are based on the information provided in Table 13.

Table 13: Impact on local authorities/SABs: Revenue from application/approval fees

		Value	Units	Source	Assumptions
Quantified estimate of impact	Low	2,100	Applications per year	Consultation with local authorities	Average number of applications requiring SAB approval (though recognising that individual local authorities may see significantly fewer or more applications than this average). Low 100, central 125, high 150, across 21 local authorities
	Central	2,625			
	High	3,150			
Monetary value	Low	597	Per application	Defra (2010)	Original value (£507) updated to 2016 prices
	Central	681			Average of low and high
	High	765			Original value (£650) updated to 2016 prices

7.27 Local authorities/SABs: Monitoring and enforcement

The annual impact on local authorities/SABs associated with monitoring and enforcement is as follows.

Low:	- £638,000
Central:	- £1,941,000
High:	- £3,797,000

These estimates are based on the information provided in Table 14.

Table 14: Impact on local authorities/SABs: Monitoring and enforcement

		Value	Units	Source	Assumptions
Quantified estimate of impact	Low	21	Total FTEs (full-time equivalents)	Info provided by LAs (4 Apr 2017)	Each of 21 local authorities/SABs in Wales requires 1.8 FTEs (min 1, max 2.5)
	Central	38			
	High	53			
Monetary value	Low	- 30,369	Per FTE	Defra (2010)	Annual salary/related costs of staff: Min £30,369 (av salary of civil engineer), max £61,467 (£72,326 in 2016 prices), mean (central) £51,348.
	Central	- 51,348			
	High	- 72,326			

7.28 Property owners/occupiers: Amenity

The annual impact on property owners/occupiers associated with amenity is as follows.

Low:	£269,000
Central:	£595,000
High:	£955,000

These estimates are based on the information provided in Table 15.

Table 15: Impact on property owners/occupiers: Amenity

		Value	Units	Source	Assumptions
Quantified estimate of impact	Low	13,050	Residents	Public Policy Institute for Wales (2015)	Assume compliant SuDS currently on 20-40% of new developments, so option applies to additional 60% (low), 70% (central) and 80% (high) of new development. Assume 2.5 residents per property
	Central	25,025		Housing White Paper (2012)	
	High	32,365		Information from local development plans provided by WG (March, 2017)	
Monetary value	Low	20.64	Per resident per year	BeST	Use values in BeST associated with 'street improvements through greening'
	Central	23.76			
	High	29.52			

7.29 General population: Carbon

The PV impact on the general population associated with carbon is as follows.

Low:	£96,000 (1,918 tonnes carbon sequestered)
Central:	£336,000 (6,711 tonnes carbon sequestered)
High:	£642,000 (12,845 tonnes carbon sequestered)

These estimates are based on the information provided in Table 16.

Table 16: Impact on general population: Carbon

		Value	Units	Source	Assumptions
Quantified estimate of impact	Low	6,868	Additional trees	As per previous impacts for residential and commercial & industrial development	Assume additional 1 (low), 2 (central) and 3 (high) medium-sized trees per new home, and 5 (low), 10 (central) and 15 (high) trees per new commercial and industrial development.
	Central	24,030			
	High	45,995			
Monetary value	Low	34	£ per tonne CO2e	Based on values in BeST for non-traded price of carbon (2020) (values vary slightly from 2018 to 2026)	PV calculated automatically in BeST
	Central	67			
	High	101			

7.30 General population: Education

The annual impact on the general population associated with education is as follows.

Low:	£10,000
Central:	£30,000
High:	£73,000

These estimates are based on the information provided in Table 17.

Table 17: Impact on general population: Education

		Value	Units	Source	Assumptions
Quantified estimate of impact	Low	600	Student visits per year	-	Assume 2 (low), 5 (central) and 10 (high) schools built with compliant SuDS per year, each leading to additional 300 student visits (10 visits for 30 children each) to see and study SuDS
	Central	1,500			
	High	3,000			
Monetary value	Low	15.94	Value of visit	BeST	Use values in BeST associated with 'value of visit'
	Central	20.16			
	High	24.38			

Option 3: Planning approach

7.31 This option provides an expectation that SuDS will be provided on all minor and major development (more than 1 dwelling or sites larger than 0.1 hectares) wherever this is appropriate and unless demonstrated to be inappropriate. It entails the use of planning conditions or planning obligations to ensure that there are clear arrangements in place for ongoing maintenance over the lifetime of the development where SuDS are used. Where SuDS are not used, current arrangements (e.g. related to O&M) are expected to continue (i.e. no change from the baseline).

7.32 The impacts considered likely under Option 3 are largely the same as those considered likely under Option 2 and included in Table 5. The differences under Option 3 compared with Option 2 are that, under Option 3, we assume:

- There are no start-up costs for SABs or developers;
- There are no SAB-related fees for developers or concurrent revenue for SABs;
- Construction and O&M costs are applicable to 30% (low), 40% (central) and 50% (high) of the developments that would achieve compliant SuDS under Option 2 (i.e. 50-70% of new developments do not include compliant SuDS);

- Additional/reduced connection charges are applicable to 30% (low), 40% (central) and 50% (high) of the developments that would achieve compliant SuDS under Option 2;
- Amenity, carbon and education impacts are applicable to 30% (low), 40% (central) and 50% (high) of the developments that would achieve compliant SuDS under Option 2; and
- There are additional, recurring costs to local authorities/SABs of consultation, planning conditions and funding agreements in relation to surface water drainage on all planning applications. General consultation requirements, and consultation requirements for statutory and other consultees, are expected to be dealt with through standing advice, as with existing planning processes.

7.33 Table 18 summarises the PV impacts for Option 3. Each valued impact is considered, in turn, below Table 18. The NPV for Option 3 is estimated to be £54.3m (range £20.4m to £460.4m). It is positive suggesting that the net benefits to society outweigh the net costs to society.

Table 18: Summary table of PV impacts for Option 3 (2018-26)

Group	Impact	Total PV impact (£ million)		
		Low	Central	High
Developers	Construction	24.1	64.2	477.9
	Connection charges	1.7	6.0	13.8
Local authorities/SABs	Consultation	- 1.0	- 2.8	- 6.0
	O&M	- 0.0	0.1	0.2
	Monitoring & enforcement	- 5.0	- 15.3	- 29.9
Property owners/occupiers	Amenity	0.6	1.9	3.8
General population	Carbon	0.0	0.1	0.3
	Education	0.0	0.1	0.3
	TOTAL	20.4	54.3	460.4

7.34 Developers: Construction of SuDS

The annual impact on developers associated with the construction of SuDS is as follows.

Residential

Low: £2,878,000

Central: £7,839,000

High: £58,541,000

Commercial and industrial
 Low: £182,000
 Central: £314,000
 High: £2,158,000

These estimates are based on the information provided in Table 19.

Table 19: Impact on developers: Construction of SuDS

		Value	Units	Source	Assumptions
Quantified estimate of impact (residential)	Low	1,566	New homes per year	Public Policy Institute for Wales (2015)	Under this option, assume 30% (low), 40% (central) and 50% (high) take-up of compliant SuDS compared to Option 1.
	Central	4,004		Housing White Paper (2012)	
	High	6,473		Information from local development plans provided by WG (March, 2017)	
Monetary value (residential)	Low	1,838	Capex saving per unit £	EPC (2017)	Outliers removed
	Central	1,958			Median value
	High	9,044			Mean value
Quantified estimate of impact (commercial & industrial)	Low	99	New developments per year	New industrial and commercial orders for construction 2018-2026 (min)	Under this option, assume 30% (low), 40% (central) and 50% (high) take-up of compliant SuDS compared to Option 1.
	Central	160		As above (mean)	
	High	239		As above (max)	
Monetary value (commercial & industrial)	Low	1,838	Capex saving per unit £	EPC (2017)	Outliers removed
	Central	1,958			Median value
	High	9,044			Mean value

7.35 Developers: connection charges avoided

The annual impact on developers associated with connection charges is as follows.

Low: £215,000
 Central: £762,000
 High: £1,749,000

These estimates are based on the information provided in Table 20.

Table 20: Impact on developers: Connection charges

		Value	Units	Source	Assumptions
Quantified estimate of impact	Low	630	Applications per year	Consultation with local authorities	Average number of applications requiring SAB approval (though recognising that individual local authorities may see significantly fewer or more applications than this average). Low 100, central 125, high 150, across 21 local authorities. Assume 30% (low), 40% (central) and 50% (high) take-up of compliant SuDS
	Central	1,050			
	High	1,575			
Monetary value	Low	341	Charge per development	Defra (2010), using data from DCWW ³¹ and SVT ³²	Assume each development with compliant SuDS would save one application charge, one sewer connection charge and inspection charge. For DCWW and SVT, these are, respectively: £155 (DCWW) and £114.90 (SVT); £183 (DCWW) and £455.67 (SVT); £43 (DCWW) and £500 (SVT). We take the average of each to generate a central value (£135 + £319 + £272 = £726), and low and high estimates for each to generate low (£341) and high (£1,111).
	Central	726			
	High	1,111			

7.36 Local authorities/SABs: consultation

The annual impact on local authorities/SABs associated with consultation is as follows.

Low:	- £128,000
Central:	- £359,000
High:	- £759,000

These estimates are based on the information provided in Table 21.

³¹ Developer services schedule of charges 2016-17

³² Developer charges 2015/16

Table 21: Impact on local authorities/SABs: Consultation

		Value	Units	Source	Assumptions
Quantified estimate of impact	Low	4.2	Number of FTEs required	Consultation with local authorities and Defra (2010)	Assume 30% take-up of compliant SuDS. 1 FTE per 150 major and minor drainage applications/year
	Central	7.0			Assume 40% take-up of compliant SuDS. 1 FTE per 150 major and minor drainage applications/year
	High	10.5			Assume 50% take-up of compliant SuDS. 1 FTE per 150 major and minor drainage applications/year
Monetary value	Low	- 30,369	Per FTE	Defra (2010)	Annual salary/related costs of staff: Min £30,369 (av salary of civil engineer), max £61,467 (£72,326 in 2016 prices), mean (central) £51,348.
	Central	- 51,348			
	High	- 72,326			

7.37 Local authorities/SABs: Operation and maintenance of SuDS

The annual impact on local authorities/SABs associated with the operation and maintenance of SuDS is as follows.

Residential

Low:	- £4,000
Central:	£12,000
High:	£19,000

Commercial and industrial

Low:	- £244
Central:	£467
High:	£694

These estimates are based on the information provided in Table 22.

Table 22: Impact on local authorities/SABs: Operation and maintenance of SuDS

		Value	Units	Source	Assumptions
Quantified estimate of impact (residential)	Low	1,566	New homes per year	Public Policy Institute for Wales (2015)	Under this option, assume 30% (low), 40% (central) and 50% (high) take-up of compliant SuDS compared to Option 1.
	Central	4,004		Housing White Paper (2012)	
	High	6,473		Information from local development plans provided by WG (March, 2017)	
Monetary value (residential)	Low	- 2.5	Opex saving per unit £	EPC (2017)	Median value
	Central	2.9			Outliers removed
	High	2.9			Mean value
Quantified estimate of impact (commercial & industrial)	Low	99	New developments per year	New industrial and commercial orders for construction 2018-2026 (min)	Under this option, assume 30% (low), 40% (central) and 50% (high) take-up of compliant SuDS compared to Option 1.
	Central	160		As above (mean)	
	High	239		As above (max)	
Monetary value (commercial & industrial)	Low	- 2.5	Opex saving per unit £	EPC (2017)	Median value
	Central	2.9			Outliers removed
	High	2.9			Mean value

7.38 Local authorities/SABs: Monitoring and enforcement

The annual impact on local authorities/SABs associated with monitoring and enforcement is as follows.

Low: - £638,000
 Central: - £1,941,000
 High: - £3,797,000

These estimates are based on the information provided in Table 23.

Table 23: Impact on local authorities/SABs: Monitoring and enforcement

		Value	Units	Source	Assumptions
Quantified estimate of impact	Low	21	Total FTEs (full-time equivalents)	Info provided by LAs (4 Apr 2017)	Each of 21 local authorities/SABs in Wales requires 1.8 FTEs (min 1, max 2.5)
	Central	38			
	High	53			
Monetary value	Low	- 30,369	Per FTE	Defra (2010)	Annual salary/related costs of staff: Min £30,369 (av salary of civil engineer), max £61,467 (£72,326 in 2016 prices), mean (central) £51,348.
	Central	- 51,348			
	High	- 72,326			

7.39 Property owners/occupiers: Amenity

The annual impact on property owners/occupiers associated with amenity is as follows.

Low:	£81,000
Central:	£238,000
High:	£478,000

These estimates are based on the information provided in Table 24.

Table 24: Impact on property owners/occupiers: Amenity

		Value	Units	Source	Assumptions
Quantified estimate of impact	Low	3,915	Residents	Public Policy Institute for Wales (2015)	Assume 2.5 residents per property. Under this option, assume 30% (low), 40% (central) and 50% (high) take-up of compliant SuDS compared to Option 1.
	Central	10,010		Housing White Paper (2012)	
	High	16,182		Information from local development plans provided by WG (March, 2017)	
Monetary value	Low	20.64	Per resident per year	BeST	Use values in BeST associated with 'street improvements through greening'
	Central	23.76			
	High	29.52			

7.40 General population: Carbon

The PV impact on the general population associated with carbon is as follows.

Low:	£29,000 (575 tonnes carbon sequestered)
Central:	£134,000 (2,684 tonnes carbon sequestered)
High:	£321,000 (6,422 tonnes carbon sequestered)

These estimates are based on the information provided in Table

25. Table 25: Impact on general population: Carbon

		Value	Units	Source	Assumptions
Quantified estimate of impact	Low	2,060	Additional trees	As per previous impacts for residential and commercial & industrial development	Assume additional 1 (low), 2 (central) and 3 (high) medium-sized trees per new home, and 5 (low), 10 (central) and 15 (high) trees per new commercial and industrial development. Under this option, assume 30% (low), 40% (central) and 50% (high) take-up of compliant SuDS compared to Option 1.
	Central	9,612			
	High	22,997			
Monetary value	Low	34	£ per tonne CO2e	Based on values in BeST for non-traded price of carbon (2020) (values varies slightly from 2018 to 2026)	PV calculated automatically in BeST
	Central	67			
	High	101			

7.41 General population: Education

The annual impact on the general population associated with education is as follows.

Low:	£3,000
Central:	£12,000
High:	£37,000

These estimates are based on the information provided in Table 26.

Table 26: Impact on general population: Education

		Value	Units	Source	Assumptions
Quantified estimate of impact	Low	180	Student visits per year	-	Assume additional visits based on 30% (low), 40% (central) and 50% (high) take-up of compliant SuDS compared to Option 1.
	Central	600			
	High	1,500			
Monetary value	Low	15.94	Value of visit	BeST	Use values in BeST associated with 'value of visit'
	Central	20.16			
	High	24.38			

Non-monetised impacts

7.42 A number of potential impacts have not been valued, largely due to difficulties in quantifying/monetising the possible change with any certainty, and the risk of double counting with other (valued) impacts. These non-monetised impacts would be more likely to be positive impacts (benefits) than negative. Furthermore none of the negative impacts (if they could be monetised) would be expected to be significant enough to overturn the net benefit identified above. These include:

- Potential impacts on water and sewerage companies, e.g. reduced revenue from surface water connection applications/charges (a transfer from developers to the water and sewerage companies), or the reduced need for monitoring and enforcement of sewer connections. This is because, even under the policy changes considered, most developments would still connect to the foul/combined public sewer. It is therefore likely that companies would still need to consent and charge for connections and inspection, and would still have the same asset base and need to undertake the same level of inspection, monitoring and enforcement.
- Certainty of adoption for developers, leading to efficiencies in planning process and development, as well as reduced/simplified interaction with a complex array of interests, including the WaSC, Planning Authority, Highways Authority and NRW;
- Reduced risk to local authorities from orphaned or abandoned schemes;
- General consultation requirements, and consultation requirements for statutory and other consultees. These are expected to be dealt with through standing advice, as with existing planning processes.
- Avoided risk of infraction of water quality related EU directives;
- Economic growth;
- Biodiversity - new or enhanced habitats and opportunities for wildlife;
- Enhanced ability to mitigate or adapt to the expected impacts of climate change;

- Additional surface or groundwater available for abstraction, or to help alleviate drought/water scarcity;
- Improved health and well-being due to increased/enhanced access and use of green space or, depending on type of SuDS used, improved air quality and temperature regulation (e.g. using green roofs). Where assessed, the benefits to health from SuDS and green infrastructure can be substantial, to the extent that they may dominate financial benefits;
- Improved or enhanced recreational opportunities (e.g. walking, fishing, watersports); and
- Reduced sewer overflows and natural infiltration of surface water before it enters watercourses, leading to improved or enhanced water quality of surface, ground, transitional or coastal waters, consistent with objectives of Water Framework Directive.

Summary of costs and benefits

- 7.43 Option 2 is the preferred option. The NPV (net present value) for Option 2 is estimated to be £164.9m (range £82.6m to £961.4m). It is positive suggesting that the net benefits to society outweigh the net costs to society. The NPV for Option 1 is zero, and the NPV for Option 3 is estimated to be £54.3m, i.e. around one-third of the benefits of the preferred option and lacking the security of outcomes of Option 2.
- 7.44 Sensitivity analysis has been applied to these results by adjusting two of the key parameters used in the appraisal, the timeframe for the appraisal period and the discount rate. As indicated in table 19 construction cost savings are identified as the main financial / quantified benefit, but even if construction costs were found to be neutral there would still be a net benefit from the proposal and wider unquantified benefits.
- 7.45 Extending the appraisal by 10 years (so that it becomes from 2018 to 2035) results in an increase in NPV for Option 2 to £286.8m (central estimate), an increase of 74%. The NPV for Option 3 increases to £94.2m, a similar percentage increase. This provides an even stronger justification for the preferred option.
- 7.46 Reducing the discount rate from 3.5% to 2% increases the NPV for Option 2 to £174.4m and for Option 3 to £57.4m. Increasing the discount rate to 5% decreases the NPV for Option 2 to £156.3m and for Option 3 to £51.5m, i.e. the impact is marginal and the relative situation does not change. Option 2 is still strongly preferred.
- 7.47 As indicated in Table 5, sensitivity analysis has also been applied to the potential impact of SuDS on land take. This is based on an additional cost to developers of £900 (low), £1,200 (central) or £1,500 (high) per dwelling. This results in a significant decrease in NPV for Option 2 to £70.0m, and for Option 3 to £10.5m (central estimates). However, the NPV is still positive in all cases and Option 2 remains the strongly preferred option.
- 7.48 The expected distribution of impacts across the key groups considered is shown in Figure 1. This suggests that developers are expected to benefit significantly

(especially under Option 2), primarily due to reduced construction costs. Local authorities may incur a small net cost (slightly larger under Option 3), largely due to the impact of additional monitoring and enforcement. The overall monetised impacts to property owners/occupiers and the general population are expected to be relatively modest, albeit positive and significant. The benefits to these groups are expected to be larger under Option 2. In short, all impacted groups are expected to be better off under Option 2 than they would be under Option 3.

8. Summary of responses to consultations and the Government response

First consultation

- 8.1 The Welsh Government consulted on the proposed approach for delivering effective SuDS on new developments, for 12 weeks starting on 19 May 2017. There were 43 responses to the consultation, the largest proportion of which were from local authorities. Other responses included non-governmental organisations, professional and industry representative bodies, consultants, utilities, trade bodies and individuals.
- 8.2 The summary of responses to the consultation and the Government response is available at <https://beta.gov.wales/implementation-sustainable-drainage-systems-new-developments>. An outline in respect of key proposals is provided below:

Commence Schedule 3 of the 2010 Act for sustainable drainage:

- 8.3 Overall there was strong support for implementing Schedule 3 of the 2010 Act . The majority (64%) of those who responded supported our proposal to commence Schedule 3. A number of local authority responses conveyed a sense of urgency and a need to provide clarity and certainty for surface water management for new developments for both developers and local authorities. The single industry response expressed concern over potential land take for SuDS and disagreed with assumptions in the impact assessment. In the Government response we noted that the industry response did not provide any Welsh supporting evidence and that it focussed largely on the approach in England, which contrasts substantially to the proposals for Wales. Sewage utilities expressed support but were concerned that they would potentially lose control over connections to their networks.
- 8.4 Following the consultation we further engaged industry and amended the RIA to take into account additional evidence provided by developers on land take.
- 8.5 We have also met sewerage undertakers on the issue of control over connections to their networks. Schedule 3 to the 2010 Act, once commenced will make the right to connect surface water to the public sewer network conditional on receiving approval from the SAB. The sewerage undertaker will be a statutory consultee in the SuDS approval process which will enable the sewerage undertaker to ensure suitable measures to protect the sewerage network are communicated to the SAB. We will monitor this matter closely as Schedule 3 is implemented and will seek evidence from the undertakers to inform the post implementation review (see paragraph 11). Ultimately, sewerage undertakers will benefit from the significant reduction in flows afforded by surface water systems for new and redeveloped sites approved and built to the SuDS Standards.
- 8.6 Taking into account the overall strong support for implementing Schedule 3 to the 2010 Act, the Government response to the consultation outlined our intention to move forward with a second stage consultation to further engage stakeholders on the draft statutory instruments needed for its implementation.

The body appointed to approve and adopt SuDS (the SAB):

- 8.7 Under Schedule 3 to the 2010 Act, the local authority becomes responsible for the duties of the SAB. Over half of all local authority responses indicated the local authority is best placed to undertake the SAB function. Most saw the benefit of taking responsibility for the SAB role, citing close links to their Lead Local Flood Authority (LLFA) Role, planning responsibilities and highways function. However a significant proportion expressed concerns over funding, staff skills and implementation costs. A number felt our impact assessment had not adequately represented this.
- 8.8 We have continued to develop the RIA in close consultation with the SuDS Advisory Group, which is representative of key stakeholders including the Welsh Local Government Association, local authorities, developers, water utilities and other regulators. In the Government response we outlined our approach to engaging further with the Advisory Group and more widely with local authorities during the second stage consultation to improve the evidence base on their resource and support needs and costs. The estimates in the final RIA have since been adjusted to reflect the additional input, although the overall findings and conclusions in the RIA do not change as a result.
- 8.9 Our approach enables the SAB to fully recover costs incurred in undertaking its approval and inspection functions. The fee rate set in the regulations has been developed through the first and second consultations and in working closely with the SuDS Advisory Group. Setting a national fee rate was broadly welcomed in consultation responses as it was felt this would provide consistency for developers and ensure fairness and transparency. There was also support for our proposal that the application of fees by SABs should be subject to reporting and review. Going forward with implementation we shall be working closely with SABs to gather information needed to report initially on an annual basis.
- 8.10 We have also developed a guidance and training package to support local authorities with implementing Schedule 3 to the 2010 Act. This work has been informed by the SuDS Advisory Group, responses received during consultation and through a series of workshops held during the second consultation. We have continued to work closely with stakeholders to ensure the package meets the needs of local authorities and is available before regulations come into effect.

The requirement for SAB approval:

- 8.11 Schedule 3, once commenced will require drainage systems for managing surface water for new developments of more than 1 dwelling or of an area equal to or larger than 100 square meters to be approved by the SAB before construction begins.
- 8.12 Over half of those responding agreed with our proposal to exempt three specific types of development from the requirement for SAB approval:
- Trunk roads and motorways managed by the Welsh Government in Wales,
 - Construction work carried out by Natural Resources Wales as the internal drainage board in exercise of its functions under the Land Drainage Act 1991, and
 - Construction of a railway.

- 8.13 A number of responses highlighted the cumulative impact of small scale developments and wanted clarity on the interface with permitted development rights and the status of single domestic dwellings. The Government response to the consultation outlined our approach to engage further on whether exemptions should include single domestic dwellings and works carried out by LLFAs. We also clarified our intention that exceptions from the requirement for approval would not extend to permitted developments exceeding 100 square meters, which addresses concerns that multiple benefits of SuDS may not otherwise be realised for larger scale permitted development.
- 8.14 Most responders agreed that time-limits for when the SAB must determine applications for approval should be set. A number of responses highlighted the issue of adequate resources for the SAB to deliver these timescales and the links and potential impact on planning processes. The Government response outlined our approach to include time-limits in the statutory instruments, which were the subject of our second consultation. Our response also clarified that SAB approval may be sought entirely separately from planning permission and that the time-limits are aimed at ensuring the SuDS approval process does not impact on overall development time-scales. Information on this is also provided in the guidance we have developed with the WLGA and local authorities.

Mandatory National SuDS Standards:

- 8.15 Schedule 3 to the 2010 Act, requires the Welsh Ministers to publish mandatory National SuDS Standards for the design, construction, operation and maintenance of SuDS. In the consultation response, those with experience of the planning system and the current interim SuDS Standards (published as voluntary National SuDS Standards in January 2016) reported they were not being used due to their voluntary status and they needed statutory status to be effective. There was consensus that the interim SuDS standards if made mandatory could deliver sustainable and affordable surface water management. An overwhelming majority (81%) of those responding agreed with the principles in the interim SuDS Standards and expressed support for implementing mandatory SuDS standard so the principles become a statutory requirement for new developments.

Second consultation

- 8.16 The Welsh Government undertook a further consultation for 12 weeks starting on 16 November 2017 on the draft statutory instruments and National SuDS Standards needed to implement Schedule 3. There were 42 responses to this consultation. Most responses were again from local authorities and a good spread of responses was also received from non-governmental organisations, professional and industry representative bodies, consultants, utilities, trade bodies and individuals.
- 8.17 The summary of responses to the consultation and the Government response is available at <https://beta.gov.wales/implementation-sustainable-drainage-systems-new-developments-draft-regulations-and-national>. An outline in respect of key proposals is provided below:

Commence Schedule 3 of the 2010 Act in May 2018 and bring forward the statutory instruments needed for its implementation:

8.18 The majority who responded agreed our proposed timescale for commencing Schedule 3 was reasonable. Many of the local authorities suggested implementation six months after the statutory instruments are laid would allow adequate time to establish the SAB and new approval processes. A number suggested a longer period and highlighted issues relating to training and support for implementation. Some statutory consultees expressed concern about workloads. Developers wanted all related information and guidance to be published before commencement.

8.19 In the Government response to the consultation we confirm our aim to commence Schedule 3 in May 2018 and lay related statutory instruments so that these come into effect in January 2019. This takes into account the time local authorities have indicated is needed to prepare for implementation.

8.20 Views were also sought on transitional arrangements for the implementation of the new requirement for SAB approval. The proposed arrangements have been widened in response to the consultation to support our objective that we do not adversely impact on planned development. The regulations now provide that SAB approval will not be required for any development for which there is an existing planning permission or for which a valid application has been made before the SuDS requirement comes into force. With the exception of single dwellings and sites with a construction area equal to or larger than 100 square meters, all new planning applications made following the coming into force date will require SAB approval.

Exemptions from the requirement for SAB approval:

8.21 Views were sought on whether LLFAs should be exempt from the requirement for SAB approval. However no clear evidence was provided to support the need for such an exemption and those opposed to an exemption cited transparency and accuracy as important factors. We have therefore decided against exempting LLFAs at this stage. We will invite any new evidence to be submitted to inform the post implementation review.

8.22 Further views have also been sought on the proposed exemption of single domestic dwellings from the requirement for SAB approval. Taking into account input from the SuDS Advisory Group and other stakeholders at the series of workshops held during the second consultation period we have included in regulations the exemption for single domestic dwellings. This addresses concerns some local authorities raised in relation to developing capacity to deal with SuDS approval for single domestic dwellings.

Enforcement and appeals regime:

8.23 The majority of responses agreed SAB enforcement powers should be given to both the SAB and the local planning authority (LPA). This will enable the SAB and the LPA to deal more efficiently with enforcement action in circumstances where this concerns both SuDS and planning applications. This proposal has therefore been included in regulations.

8.24 There was clear support for the proposed framework powers for SAB enforcement which include:

- powers of entry,
- a four year time-limit on when the SAB is able to issue an enforcement notice,
- provisions for compensation to be sought by the developer or other person where a loss is suffered as a result of the SAB exercising its powers for entry and stop notices, and
- the duty on the SAB to maintain a register of SuDS enforcement notices.

The majority of responses agreed our proposed regulations are proportionate and align with requirements under similar regimes. We have therefore included these provisions in regulations.

8.25 There is an increased risk of flooding and water pollution in the event of a development not complying with the law. Most responders did not answer our question about the proposed non-criminal sanctions and criminal sanctions which we believe are necessary for encouraging compliance. Those that did answer largely agreed the proposals were appropriate and proportionate and in line with those used for planning enforcement. The proposed intervention powers have therefore been included in regulations.

8.26 There was clear support for the proposed right to appeal against SAB decisions with most responders welcoming the proposed appeal processes which align closely with those in place for planning. We have therefore included the proposed provisions in regulations.

SAB adoption duty and administrative processes:

8.27 In Schedule 3 to the 2010 Act, SuDS that serve properties within a single curtilage are excluded from the SAB adoption duty. The majority of responders agreed with our proposed definition of a single property drainage system which will help determine the types of development that will be exempt from the duty to adopt. However many responses mistakenly conflated this adoption exemption with the SAB approval process, it is therefore evident that further clarity is needed, which we will provide in guidance.

8.28 The proposed four week time-limit for the SAB to complete administrative processes including returning any non-performance bond to the developer was also somewhat misunderstood. We will be making it clear in guidance that the four week time-limit only takes effect from the date when the SAB conditions of

approval are met; this may include an appropriate time period for the effectiveness of the drainage system to be proven (known as the defect period).

Statutory works:

8.29 Those who commented on our proposals in relation to works undertaken by statutory undertakers provided useful information which we have taken into account as follows;

- Telecommunications has been added to the list in regulations to safeguard SuDS on public land owned by local authorities in respect of work undertaken by statutory undertakers.
- We have decided at this stage to include in regulations the proposed four weeks timeframe within which statutory undertakers must notify the SAB of works that may affect the SuDS operation. Going forward we will monitor the situation which will include inviting evidence to be submitted to inform the post implementation review.
- We have amended the timescale in regulations to allow a three year period for the SAB to determine if it is satisfied that the SuDS reinstated following works by a statutory undertaker functions in accordance with the SuDS Standards. This aligns with similar provisions under highway legislation.

Consultation workshops

8.30 A series of consultation workshops were held across Wales in February 2018, around 120 people attended in total from local government (60%), civil engineering and consultants, water industry, the construction sector, design/planning consultancies, environmental NGOs and regulators. Although invited, no one from the agriculture industry attended.

8.31 A full report of the workshops is available from the Welsh Government on request. In summary the following themes which have informed our approach to implementation were discussed:

- Cost impacts for local authorities and developers,
- The importance of communicating the new process,
- Training and the need for skilled staff,
- The need for consistency across SABs,
- Dealing with single properties for approvals and adoption,
- Links with the planning process and its distinction from the SAB role, a technical approval process which is independent of planning, and
- Guidance and information requirements for SABs

9. Competition Assessment

9.1 Expected impacts on competition are set out in Table 27 below.

Table 27: Competition filter test

Question	Answer yes or no
Q1: In the market(s) affected by the new regulation, does any firm have more than 10% market share?	No
Q2: In the market(s) affected by the new regulation, does any firm have more than 20% market share?	No
Q3: In the market(s) affected by the new regulation, do the largest three firms together have at least 50% market share?	No
Q4: Would the costs of the regulation affect some firms substantially more than others?	No
Q5: Is the regulation likely to affect the market structure, changing the number or size of businesses/organisation?	No
Q6: Would the regulation lead to higher set-up costs for new or potential suppliers that existing suppliers do not have to meet?	No
Q7: Would the regulation lead to higher ongoing costs for new or potential suppliers that existing suppliers do not have to meet?	No
Q8: Is the sector characterised by rapid technological change?	No
Q9: Would the regulation restrict the ability of suppliers to choose the price, quality, range or location of their products?	Yes

9.2 The regulation is likely to create a shift away from the use of underground proprietary SuDS products, and more traditional engineering-based drainage solutions, towards novel, greener above-ground solutions and products. However, the analysis presented here suggests that this move is likely to result in lower costs for developers, their supply chains and others. In addition, no restrictions on the type or price of existing or new products associated with the regulation are foreseen or expected.

9.3 In summary, the regulation is unlikely to have a significant detrimental effect on competition.

10. Specific impact assessments

Small Firms Impact Test

10.1 The start-up costs for developers are based on an estimate of 5 (low), 10 (central) or 15 (high) person-days of transitional, one-off time (for training, skills, etc). The start-up costs for local authorities/SABs are based on the cost of 1 FTE for approximately 3 months, plus additional set-up costs (e.g. IT, training). These costs are likely to have a larger impact on smaller firms or local authorities with fewer employees than a larger organisation.

10.2 However, the analysis presented here suggests that any additional costs will be more than offset by reduced construction costs and other impacts.

Greenhouse Gas Assessment

10.3 The preferred option is likely to provide benefits in terms of both climate change adaptation and mitigation. The analysis presented here suggests that between 1.9 and 12.8 thousand tonnes of carbon could be sequestered under the preferred option over the eight year period analysed, although this benefit would continue beyond this period.

Wider Environmental Issues Impact Test

10.4 As highlighted in the analysis and the non-monetised section above, the increased use of good quality compliant SuDS under the preferred option is likely to have a number of positive environmental impacts, including supporting localised biodiversity, reducing air pollution and improving the quality of water.

10.5 Evidence of the potential multiple and wide ranging benefits of SuDS is further illustrated in the EPC report. Overall the findings indicate use of SuDS on new developments in Wales is variable in quality and performance. There is currently a preponderance of ‘hard’ SuDS (largely comprising underground measures and attenuation ponds), with fewer ‘landscaped’ (vegetated) SuDS that can potentially deliver multiple benefits, including enhanced biodiversity.

10.6 Potential benefits of good quality SuDS are similarly emphasised in SuDS guidance “Maximising the potential for people and wildlife” (RSPB and WWT, 2012)³³. This concludes that, where SuDS are designed to integrate surface water management and water quality improvements with people and wildlife, they have the potential to:

- manage volume and flow rates of run-off to reduce the downstream flow and destructive power of surface water, and reduce the risk of flooding,
- improve water quality by reducing pollution locally and downstream in streams, rivers and estuaries,
- encourage natural groundwater recharge to help maintain river and stream flows in periods of dry weather, and support wetlands in the wider landscape,
- protect and enhance water quality and provide significant opportunities for wetland habitat creation,
- support the well-being of people and communities and increase the amenity value of developed land, and
- increase evapotranspiration and climate regulation in urban areas.

10.7 Numerous studies highlight key concerns about the significant effects of entrapment in conventional drainage of wildlife. A recent survey³⁴ in a single local authority area found these “*number in the hundreds over the course of a single year*”, posing a key risk to amphibians and small mammals, some of which are protected species. In conclusion the study recommended that the implementation of good quality SuDS designed for wildlife, as well as for flood risk, is undertaken.

³³ https://www.rspb.org.uk/Images/SuDS_report_final_tcm9-338064.pdf

³⁴ PKC SuDS Biodiversity Review and Report, A Study of Mitigation, Tayside Biodiversity Partnership, August 2015

Also that the requirement for SuDS on new developments has the potential to provide a valuable new resource to halt the recent global amphibian declines associated with habitat loss.

Health and Well-being Impact Test

10.8 As highlighted in the non-monetised section above, the increased use of SuDS under the preferred option is likely to have a number of positive impacts on health and well-being. Due to the risk of double counting (particularly with amenity benefits to property owners/occupiers), these impacts have not been monetised, though they could be very substantial.

Further, the Natural Resource Policy (2017) for Wales states that “increasing access to green spaces and providing community facilities to bring people together is highlighted as a ‘best buy’ to prevent mental ill health and improving mental well-being by Public Health Wales. The World Health Organisation suggests that public health approaches with health, social, economic and environmental benefits, such as safe green spaces and active transport, have been shown to be cost-effective with potential returns on investment. Studies also suggest that people living closer to good-quality green space are more likely to have higher levels of physical activity, and are more likely to use it and more frequently”.

By helping to adapt to flooding, extreme weather events and climate change, SuDS can reduce risks to public health and associated burdens upon health services³⁵. Further, where opportune, SUDS schemes should include or link with initiatives with other population health benefits e.g. including the creation of greener, cleaner and tranquil spaces, to mitigate population exposure to environmental noise³⁶, air pollution and any potential for a respite location during heat-waves.

Human Rights Impact Test

10.9 It is envisaged that the preferred option will have no impact on human rights.

Justice Impact Test

10.10 It is envisaged that the preferred option will have no impact on the justice system.

Rural Proofing Impact Test

10.11 The preferred policy option is to make the use of SuDS mandatory for all new developments. There are no specific impacts on rural communities, the requirement for SAB approval will apply in both urban and rural areas for all minor and major development of more than a single dwelling and construction area equal to or larger than 100 square metres.

10.12 In response to our second consultation we have considered in earnest whether agricultural developments should be exempt from the requirement for SAB approval. Research indicates there is potential for industrial developments to benefit from effective SuDS. The opportunities for industrial developments are illustrated alongside other categories of development in evidence and case studies in the EPC³⁷ report. In particular the analysis shows good quality compliant SuDS can:

- Reduce contamination of groundwater sources used to provide drinking water,
- Improve water quality by reducing pollution locally and downstream in streams, rivers and estuaries,
- Manage flow rates to reduce the destructive power of surface water,
- Reduce sediment load in runoff,
- Reduce the risk of flooding,
- Save energy for heating and cooling by shading buildings, lowering summertime temperature, providing insulation in winter and reducing wind speeds,
- Contribute to reduced or sequestered greenhouse gas emissions.

It is our aim to keep exemptions from the requirement for SAB approval to a minimum in order to maximise the potential opportunities SuDS can deliver for all new developments.

Sustainable Development Impact Test

10.13 The preferred option supports and is fully consistent with the principles of sustainable development and will contribute to a more sustainable Wales.

10.14 Future generations are expected to benefit significantly from the preferred option.

10.15 It fully reflects the following principles which underpin the sustainable development principle in the Well-being of Future Generations (Wales) Act 2015:

- **Long-term thinking:** ensuring a greater emphasis on long-term outcomes, the proposed policy to make mandatory the requirement for sustainable drainage on new developments fully reflects the need to protect and enhance the environment for present and future generations. A principle of the national standards is to ensure that the design of the SuDS take account of the likely impacts of climate change. Adapting to a changing climate is an important safeguard of lives and property over the long-term.

³⁷ <https://gov.wales/docs/desh/publications/170209-suds-evidence-epc-final-report-en.pdf>

- **Integration:** the evidence suggests good quality, SuDS compliant with the national standards may have multiple benefits, integrating:
 - Social issues, SuDS may result in increased amenity through enhanced attractiveness and liveability of developments, improved or enhanced recreational opportunities, increased educational opportunities for learning and development.
 - Environmental issues, evidence suggests SuDS may contribute to reduced or sequestered greenhouse gas emissions and positive impacts on water quality, new or enhanced opportunities for habitat and wildlife.
 - Economic issues, through balancing positive impacts of SuDS in the community, for developers and householders, against the marginal increase in costs for Local Authorities for undertaking enforcement and monitoring.
- **Working across organisational boundaries:** the preferred option has been developed with the involvement of government, private and voluntary organisations and individuals who are representative of stakeholders in the sector.
- **Focusing on prevention:** the preferred option focuses on implementing good quality sustainable drainage. It is envisaged this will have positive impacts, ranging from climate change mitigation to improved health and well-being and protecting habits and wildlife.
- **Engagement and involvement:** Implementation of Schedule 3 of the 2010 Act continues to be informed by an advisory group representing a wide range of stakeholders in the sector.

Welsh Language

10.16 It is not envisaged that the preferred option will have any impact on the Welsh language.

Statutory Equality Duties Impact Test

10.17 It is envisaged that preferred option will have no impact on statutory equality duties.

11. Post Implementation Review

11.1 The Welsh Government will undertake a review of the usage of these regulations. In particular we will ask the SAB and other stakeholders to assess the effectiveness of these regulations; this will include inviting evidence to be submitted on key aspects of the regulations. We will also ask the SAB to provide information to the Welsh Government on the application of fees which will inform a review by the Welsh Government of the level of fees.

11.2 It is our intention to conduct the review at least two years following the date when the regulations come into effect. This is to ensure sufficient evidence is available to inform the review.

Annex 1: Housing development

Residential
